

DA12 Headworn Microphone

DA12 BE (Beige, Omni, -45db Sensitivity)

Superior Sound, Permanent Positioning, Continuous Comfort!

Trusted Performance

The widely used Que Audio DA12 Headworn Microphone is well known for its superb sound, comfortable fit, and “stay-in-place” performance. The exceptional sound quality of the DA12 is the result of its 2.5mm European micro condenser capsule delivering the same trusted, high-end, water resistant, full frequency, superlative audio quality since 2008.

The extremely small size of the capsule makes it inconspicuous and easy to position, while its big clear sound, and high SPL characteristics deliver the presentation and performance expected from a top of the line microphone. Perfect for church pastors, theater actors and singers, sportscasters, on-air or video talent, aerobics instructors, presenters, in the boardroom, and more.

New recent enhancements to the DA12 include a streamlined, tapered spring-loaded ear cushion providing more comfort and flexibility, while delivering that stay-in-place quality the DA12 is known for. This re-designed slimmer ear cushion also delivers that comfortable fit over longer periods.

The DA12's moveable boom arm allows for additional flexibility while positioning the mic capsule giving a full inch of play in the length of the boom arm. Its new higher density, more robust, flexible boom-arm material allows for worry free bending of the boom arm to additionally aid in the capsule placement for achieving the maximum in audio quality results.

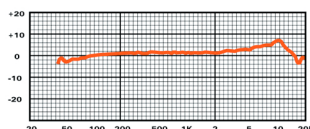

- **2.5mm full-bandwidth water resistant micro capsule**
- **Spring-loaded ear cushion for better comfort and hold**
- **Moveable fully adjustable boom arm for added flexibility**
- **Includes new thermoplastic “stretch” cable, tie clip, (2) windscreens**

Available in Black or Beige, Standard and Petite (child) models

Specifications: DA12
Element: Back Electret Condenser
Polar Pattern: Omnidirectional
Frequency Response: 20Hz-20Khz
Sensitivity: -45dB $\pm$ 3dB
Output impedance: 2K ohms $\pm$ 30%
SPL max: 140dB
Operating voltage: 0.9V (optimal) – 5V (maximum)
Cable: 1.4mm * 1.8m
Weight: 1g (W/O cable and connector)
Mic Dimension: 3.5mm

Q Connectors sold separately for most 3rd party wireless transmitters and 48V phantom powered XLR.

*Specification and design subject to change without notice
